

# Lens Test Document

This is a synthetic fixture for the Lens iOS scanner.  
It exercises the binarization (B&W document filter) and  
perspective rectification routes described in spec §11.

The document contains several lines of black text on a  
white background. The text below provides ample material  
for OCR validation:

The quick brown fox jumps over the lazy dog.  
Pack my box with five dozen liquor jugs.  
Sphinx of black quartz, judge my vow.

Output PDFs are validated by extracting `string` from a  
PDFDocument and asserting against keywords above.
